

# WUNDERFIXX

## Concrete smoothing and patching compound

This high performance, gray concrete smoothing and patching compound is ideal for concrete and masonry surfaces. With excellent bonding characteristics and durability in wet environments, it can be used for cosmetic patching, detailing and smoothing on tilt-up panels, precast, formed work, concrete block and all other concrete and masonry surfaces.

## Australex Group - Multi Storey Building Supply

The Australex Group owns several high rise building blocks around Sydney. During the development stages, subcontractor Concrete by Knight purchased over 100 bags of Wunderfixx for the internal and external walls on several of these developments.

Not only was Wunderfixx used to patch walls, it was also poured into precast molds to form internal concrete structures. Wunderfixx was a suitable application for this as the client was able to pour and paint in the same day.

## Maroubra Town House Repairs

A collection of town houses located in Sydney's Eastern Beaches suburb of Maroubra faced broken, flaking and cracked render on the exterior of their properties. This depreciation occurred due to coastal conditions of salt and wind.

Wunderfixx was applied to over 10 town houses to repair and restore the look of the render. Labourers applying the product were able to apply Wunderfixx to the areas, and paint over several hours later.

## TECHNICAL DATA

### Working Time:

- 60 minutes at 21 degrees celsius
- Sand and paint the same day

### Compressive Strength

ASTM C-109 Mod.

### Age:

24 hours  
28 Days

### Compressive Strength:

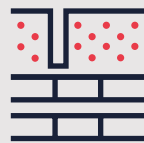

10.3MPa  
13.8MPa

### Yield:

0.014 cubic meters per 25 kg bag

**Patch, paint and sand**  
the same day

**Self-curing technology**

**Grit free, ultra-smooth**  
finish

**Suitable from skim coat**  
to 12mm thick
